(57) **ABSTRACT**

A basketball backboard may include one or more weights disposed proximate the perimeter of the backboard in order to enhance the rebounding characteristics of the backboard. In particular, a first weight may be positioned proximate a first side of the backboard and a second weight may be positioned proximate a second side of the backboard in order to enhance the rebounding characteristics of the backboard. Advantageously, the weights may be positioned internally within the backboard or the weights may be positioned externally to the backboard. In addition, the weights may be selectively or permanently attached to the backboard, and the weights may also be sized and configured to increase the rigidity of the basketball backboard.
